

## Energy Policy

This policy covers all Toll Group activities that consume, or have an influence on the consumption of, energy within our operations and business processes.

We are:

- Committed to the comprehensive management of energy and acting to reducing our rates of energy usage and costs.
- Building a clear understanding of the risks to our Group of energy market trends and building strategic plans to address these risks.
- Building a clear understanding of the risks to our Group of key environmental issues and building strategic plans to address these risks.
- Developing a culture of responsible management of energy by developing the awareness, involvement of our employees.
- Where appropriate, committed to establishing Business Unit-specific energy management strategies.
- Committed to actively considering the use of alternative energy sources as they become economically viable.
- Sharing best practices for energy management across our business Divisions.
- Incorporating future energy considerations into our business decision-making processes, particularly our capital allocation.
- Engaging with our suppliers, customers and joint venture partners to develop improved energy practices.
